

Resort Case Study

Using Waveteq's Wireless Broadband Solution, the 50 unit KlubKal Vacation Resort was able to provide all their guests high speed access using their laptops. This was important as pointed out by KlubKal's manager, Noel Harder. "Many of our guests like to have the Internet when they vacation and Waveteq's wireless system has allowed people to stay in touch with their friends, family and businesses during their stay here. The guests love it and for us it was easy to get installed and manage." The service is included as part of the site fee. This case study provides a description of the KlubKal network.

The Benefits

- Guest convenience
- Potential for increased revenue
- Designed for complete coverage using laptops and personal Wi-Fi devices
- Uses existing infrastructure
- Unobtrusive hardware that does not interfere visually with the resort atmosphere

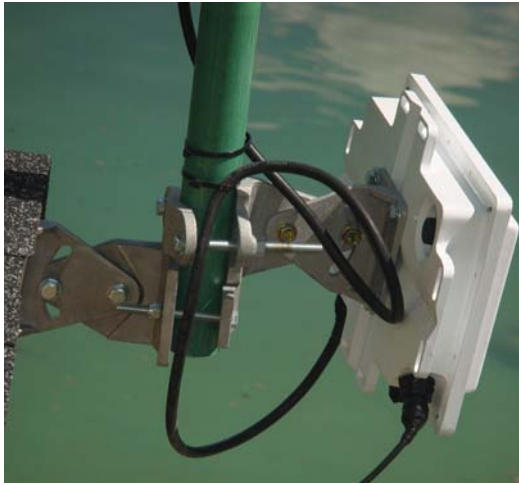

WAVETEQ

Solid Wireless Broadband
